83 nutritional, health and other factors pertaining to the individual customer/user in a secure manner, with

84 permission levels being set by the individual for access and or use by authorized health professionals

85 and third parties;

86 means for maintaining the appropriate databases within the mobile device including in conjunction

87 with a local and or network server; further including

88 means for the health professionals, hospitals or loved ones to be contacted automatically by having the

89 mobile device set up by the user to respond, on one or more channels, to certain pre set hazard levels

90 and events;

91 means for the appropriate complement of data to be readily available for use by the health professional

92 for emergency response tailored to the individual;

93 means for the mobile device to be used in a stand alone manner or in conjunction with a local or

94 network server; including the

95 means for the mobile device and the servers to be equipped with a single channel or a multi channel

96 communication capability;

97 means for utilizing the mobile device for gastronomic information, instruction and control tasks

98 inclusive of facilitating emergency response.

99

100 18. A gastronomic information and instruction system as in claim 17 including  
101 means for the geographical location of the customer and the vendor to be determined and provided to  
102 one or more of the parties, in a dynamic setting where the user may be stationary, in motion and or  
103 headed in a particular direction;  
104 means for the best proximate location and directions to be provided to the user;  
105 means for the estimated arrival time to be determined and means for said information to be used for  
106 providing just in time seating and initiation of food preparation;  
107 means for accessing the appropriate preferences set up by the user within the mobile device, a local  
108 server, a network server inclusive of a combination thereof and their individual and collective data  
109 bases,  
110 means for an optimal determination of a vendor, means for the selection of a vendor establishment  
111 including the means for the selection of specific menu items best suited for the health, quality of the  
112 dining experience and cost effectiveness to the user,  
113 means for communication between the customer and the vendor for the desired gastronomic  
114 information and instruction actions.

115  
116 19. A gastronomic information and instruction system as in claim 18 including  
117 means for the user to search the Internet, other web sites or other servers and their data bases for  
118 appropriate recipes using a mobile or stationary device using one or more channels of communication  
119 of the mobile device; including  
120 means for contemporaneously conducting one or more related or non related communications such as  
121 voice, video and data on one or more same or different channels;  
122 means for screening the recipes for appropriateness to the individual against pre set rules;  
123 means for determining the types and optimal quantity of ingredients needed for the food preparation of  
124 one or more recipes by accessing the user's personal databases or the data bases of the grocer or the  
125 data bases located on a local or network server using one or more channels of communication;  
126 including  
127 means for determining the availability of the ingredients at various grocers and the best location of the  
128 grocers relative to the user, including taking into account various factors such as the price of each  
129 ingredient, the availability or lack of availability of the partial or full set of ingredients, such that the  
130 grocer that meets certain pre set user defined rules is selected;  
131 means for the stationary or mobile device user to communicate with the selected grocer to initiate the  
132 fulfillment of the order for the selected ingredients in the quantities desired, at the time desired,

133 inclusive of the indicated pick up or delivery means;  
134 means for the grocer to charge the customer's account via a credit card or other means and the  
135 customer to approve such charges;  
136 means for providing a real time or periodic summary and analysis of the usage of certain recipes,  
137 ingredients, nutritional, caloric values and other pertinent factors to the user or his or her designees,  
138 such as health professionals, for total health management of the user,  
139 means for the appropriate information to be maintained in data bases that may be resident on the  
140 mobile device, the local and or network server; and further including  
141 means for the data to be uploaded or down loaded on command or at pre set intervals on one or more  
142 channels of communication; including  
143 means for contemporaneously providing the user with a full range of other communication capabilities  
144 on one or more channels of the mobile device;  
145 means for the mobile device to perform the desired functions in a stand alone manner or in  
146 conjunction with the local or network server.

147  
148 20. A gastronomic information and instruction system as in claim 19 including  
149 means for recipes to be archived, searched and selected from the data base resident within a stationary  
150 or mobile device, a local and or network server;  
151 means for recipes, food preparation techniques and or instructions to be provided to a stationary and or  
152 mobile device, by wired or wireless means, for use by the device itself or for use in conjunction with  
153 an intelligent appliance performing the functions of food preparation, food storage and other related  
154 functions; including  
155 means for recipes and food preparation techniques and or instructions to be provided by wired or  
156 wireless means, to an intelligent food preparation, food storage and other related intelligent appliances  
157 for immediate usage or for archival within such an intelligent appliance for future use;  
158 means for the intelligent appliance to communicate with a mobile device, a local and or network  
159 server and other intelligent appliances within a local network and or across other networks using one  
160 or more communication channels; further including  
161 means for intelligent appliance to operate with one or more wired or wireless communication  
162 protocols to access or be accessible by a range of stationary devices, mobile devices, other intelligent  
163 appliances, local and or network servers;  
164 means for the intelligent appliance or appliances to operate in an IP based mode, a USB mode, a Blue  
165 Tooth mode, a 802.xx mode or other modes to appropriately select the communication mode and

communicate with other mobile devices, other intelligent appliances, local servers and or network servers by wired or wireless means in a sequential or simultaneous manner; including means for initiating and executing food preparation and related tasks on pre set commands at the designated time and in a designated manner or by a command received from a stationary or mobile communication device via one or more channels of the mobile device directly or in association with a local and or network server; means for monitoring the progress of the food preparation activity and other information; means for communication and signaling with other intelligent appliances within the local network or across a network including the Internet, for efficient preparation of the full range of a meal working in tandem with other intelligent appliances; means for the progress of the food preparation activity and related tasks to be communicated and signaled to one or more other intelligent appliances, mobile devices, one or more local servers and or network servers for monitoring and control purposes.

21. A gastronomic information and instruction system as in claim 20 including means for communication by one or more communication methods and or communication protocols between a mobile device, an intelligent appliance, a local and or network server to access, upload, download and manage gastronomical information and instruction tasks; including means for accessing and translating the textual menu or recipe descriptions available in one or more languages to textual menu or recipe descriptions into one or more different languages using the language translation capability resident within the mobile device, the local server an or the network server; including means for accessing and translating the textual menu or recipe descriptions available in one or more languages to audio menu or recipe descriptions in one or more different languages using the text to voice and language translation capability resident within the mobile device, the local server an or the network server; including means for displaying images, audio and video related to various ingredients, food items and preparation methods on a mobile or stationary device for error free selection, means for selection, ordering, and executing transactions by different input/output methods that include voice, touch and other means utilizing a mobile or stationary device.
